

Error handling

Exceptions are handled by themselves using the `errorRegistration(Exception e)` method.

In case the errors are not caught by the codeunit itself, the generic error handler takes over

1. Logs the error in the eventlog
2. Returns a standard error page to the user

Other debugging options include `log4j` and specialized TempusServa **`Systemout.print`** functions (yes, the class name is "Systemout").

```
Systemout.println("hello world");  
Systemout.printSql(myStatment);
```
