

Cloud backup overview

Backup of Tempus Serva instances running in AWS is done in the following manner

1. Instance saves .sql for each table in the database
 - Rsyncs the files from EACH instance
 - Build daily archives containing all .sql files
 - Registers succesfull backup on the monitor server
2. Remote backup server
 - Rsyncs the files from EACH instance
 - Build daily archives containing all .sql files
 - Registers succesfull backup on the monitor server
3. Site 24 polls the monitor server
 - If failed: Sends warning emails

The backup setup is part of the server creation service
