

Bulk import files

What it does

Imports files and creates a record for each of them.

First setup

[Optional, if extra config is required to get the codeunit working]

How to invoke

Open the page

```
main?command=com.tsnocode.codeunit.system.bulkimport.ImportPage
```

Options

[Optional options, that can be set at runtime, eg. url-parameters]

Configuration

[All possible configurations and where to edit them]

Developer info

- Type: [CodeunitPagecontent](#)

- Security: admin, datahandler, or specific group
 - Classpath: com.tsnocode.codeunit.system.bulkimport.ImportPage
-
