

Using Google fonts

Find a font you like

<http://www.google.com/webfonts>

Click "Quick use" on the font you want to use and follow the directions.

Change your stylesheet like this example

```
...  
@import url(http://fonts.googleapis.com/css?family=Molle:400italic);  
...  
.TempusServaPage h3 { font-family: 'Molle'; }  
...
```

The import method is needed, but embedding by a link inside a wrapper is also possible.
