AI Conversion

Usage

Ever stood with a large amount of unstructured documents, wanting to convert them into a structured database.

With our AI Filemorph that is actually possible: You upload large amounts of documents, that are converted and linked to database records.

The Filemorph process

What the user sees

1. Bulk upload of files
2. Each file is converted to a record
    - Record attributes are populated with data from the file
    - The source file is attached to the record

What happens behind the scene

- Files are uploaded
- For each file
    1. Create a record
    2. Uploaded to the new record
    3. Files are converted text streams
        - Some files will be OCR processed
    4. For each attribute in the record
        - Pass data and ask question to language model
        - Transform and populate the value

Conversion cost will be roughly 0,1 DKK per attribute per record.
