[Description of configs]

Developer info

- FeltTypeID: 720
- SQL datatype: N/A
- Class name: FieldExportTemplate

Button: Script execution

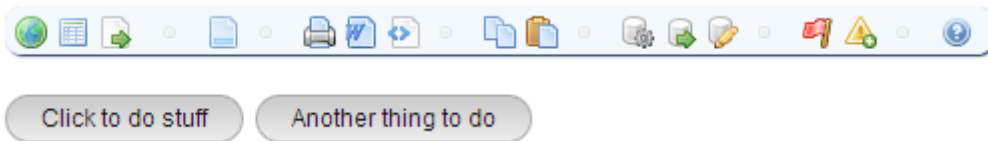

Execute script when clicking the button, with option to save data first.

Properties

- Type: Action button
- Groupable: No
- Show in lists: No
- Searchable: No

User interface

Field in show mode

Due to its nature this field has no special editing mode.

Configuration

This field requires configuration before deployment.

The screenshot shows a window titled "Edit field configuration". On the left, there is a vertical sidebar with the label "Javascript". The main area of the window is a large, empty text editor. At the bottom of the window, there are two settings: "Submit after" with a checked checkbox and the text "Data will be submitted after script execution", and "Group filter" with a dropdown menu showing "--- NONE ---" and the text "Optional filter to display to certain groups". A "CANCEL" button is located in the bottom right corner.

Javascript: Here you write code to be executed when button is pressed.

Submit after: Saves the record immediately after code has been run.

Group filter: limit access to a single group.

Developer info

- FeltTypeID: 730
- SQL datatype: N/A
- Class name: FieldExecuteJavaScript

Button: Parameterized URL

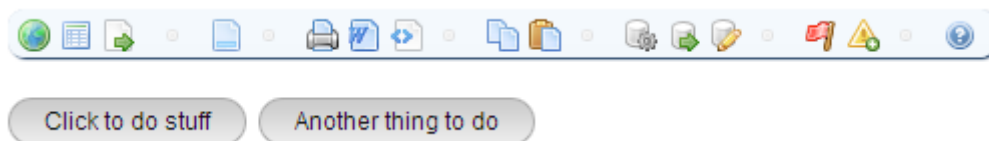

Button to navigate somewhere else. Can be to an external url.

Properties

- Type: Action button
- Groupable: No
- Show in lists: No
- Searchable: No
- Requires configuration: Yes

User interface

Field in show mode

Due to its nature this field has no special editing mode.

Configuration

Edit field configuration	
URL template	
Group filter	--- NONE --- Optional filter to display to certain groups
CANCEL	

URL template: Here you write the target url of the button link. You can use data from a field with the syntax [*DATA*]. DataID can likewise be used via [DataID]. It is also possible to use this field to point to some other location in the application by starting the url from "main?".

Group filter: Contrary to what it says, you can only filter to a single group, not several.

Developer info

- FeltTypeID: 740
- SQL datatype: N/A
- Class name: FieldParameterLookup

Button: Related list search

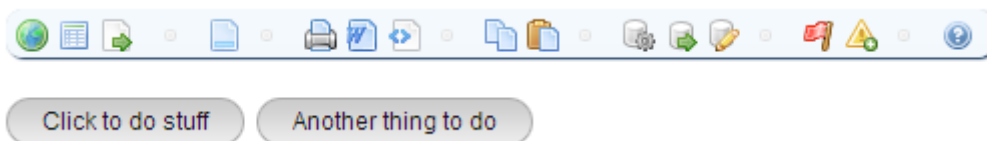

Look-up in related list with parameter

Properties

- Type: Action button
- Groupable: No
- Show in lists: No
- Searchable: No
- Requires configuration: Yes

User interface

Field in show mode

Due to its nature this field has no special editing mode.

Configuration

The dialog box is titled "Edit field configuration". It has three main sections: "Solution to search" with a dropdown menu, "List of fieldmappings" with a large empty text area, and "Group filter" with a dropdown menu showing "--- NONE ---" and a label "Optional filter to display to certain groups". A "CANCEL" button is at the bottom right.

[Description of configs]

Developer info

- FeltTypeID: 741
- SQL datatype: N/A
- Class name: FieldParameterListSearch

Codeunit path

Additional parameters

Group filter

--- NONE ---

Optional filter to display to certain groups

CANCEL

[Description of configs]

Ajax subforms

The following code changes subform behavior to call the codeunit silently and reload the page when done

```
$(function() {  
  $('#VB_DATA_SUBFORM a.codeunitButton').click( function(e) {  
    e.preventDefault();  
    $.get( $(this).attr("href") );  
    //$(this).parent().parent().hide();  
    location.reload();  
    return false;  
  });  
});
```

Developer info

- FeltTypeID: 750
- SQL datatype: N/A
- Class name: FieldCodeunitPage

Button: Status changer

Changes the status of the record to the selected status

Properties

- Type: Action button
- Groupable: No
- Show in lists: Yes
- Searchable: No
- Requires configuration: No
