

Lookup: Data item

Create reference to another record. This works the same as the field "Parent reference", but creates a drop-down list of options instead of using auto-complete. Useful for when there isn't a vast amount of records to select from. This field must be used for Lookup: Data item nested to work.

Properties

- Type: Lookup
- Groupable: No
- Show in lists: Yes
- Searchable: Yes

Configuration

This field requires configuration before deployment.

Edit field configuration

Parent solution	<input type="text"/>
Status filter	<input type="text"/> (ID)
Apply security	<input type="checkbox"/>

Submit

Cancel

Parent solution: Choose which entity the parent record will be chosen from.

Status filter: Optionally, you can specify a StatusID of a single status in the parent entity that all the record options should have.

Apply security: If this is not checked, then records will show up in the dropdown even if the user does not have permission to read them.

Developer info

- FeltTypeID: 561
- SQL datatype: INT(11)
- Class name: FieldLookupListRecordKey
