

# Satelite server handling

| System name                  | Display name                           | Explanation  | Extra info |
|------------------------------|--|--|------------|
| <b>serverSateliteMaster</b>  | Master: Server is MASTER               | The master server controls the satellite, and contains ALL data                          |            |
| <b>sateliteDatabaseHost</b>  | Master: Satellite DB hostname          | Connection information for satellite database (requires R/W access)                      |            |
| <b>sateliteDatabaseJDBC</b>  | Master: Satellite DB database          | Connection information for satellite database (requires R/W access)                      |            |
| <b>sateliteDatabaseUser</b>  | Master: Satellite DB username          | Connection information for satellite database (requires R/W access)                      |            |
| <b>sateliteDatabasePass</b>  | Master: Satellite DB password          | Connection information for satellite database (requires R/W access)                      |            |
| <b>serverSateliteSlave</b>   | Satellite: Server is SATELITE          | Warning: The satellite is controlled by the master server, and contains a SUBSET of data |            |
| <b>allowRemoteCacheReset</b> | Satellite: Cache reset allowed via URL | Allow anonymous cache reset using only password  |            |
| <b>cacheResetNowPassword</b> | Satellite: Cache reset password        | Password to include in the URL for the cache reset                                       |            |
