

# Hardcoding policies

How to hardcode/overwrite/overload policies, making it impossible to change them at runtime.

Modify the context file (the xml-file in tomcats conf folder), eg.

```
nano /usr/share/tomcat/conf/Catalina/localhost/app.xml
```

Within th `Context` element in the xml-file add one `Parameter` element per policy that should be hardcoded/overwritten, eg.

```
<Parameter name="Policy.smtpTestMode" value="true"/>
```
