

# Analyse Flowtotal

User activity will display an OLAP cube for **total flow** time to certain solutions.

The total flow time is defined as the time span between creation and point in time where a final status is reached.

Furthermore each solution can have targets for good performance defined:

- Goal: Expected total process time
- Tolerance: Acceptable total process time

## How to activate this feature

- User must have the **Business analyst** property set
- The solution must have **Activity monitoring** property set
- The service **OLAP Flow total** must be active
