# Export templates

Export templates are **binary files** uploaded to the template, containing special tags where the content from Tempus Serva fields should be inserted. Transformation of tables, files etc. is done automatically.

An example for a Word report is found here: Word documents from templates

## DOCX / Word limitations

Content can inserted most places in the document, except for the following

- Page header and footers
- Document metadata

Due to Microsoft Word everchanging document format, it is not possible to preserve the all styling of text inserted into drawing building blocks (textareas,circles etc.).

- Normal formatting will be preserved
- Special properties like angle will be lost

## PDF templates

PDF templates a basically Word templates transformed to PDF afterwards. To build PDF's just upload a normal docx template, and change the type to PDF after upload.

To enable docx to pdf conversion the configuration 'servicePdfConverter' has to be set up.
To do this, first a token has to be generated and inserted into the database on the convert server.
This token has to be added to the value of 'servicePdfConverter', after the url.
The value of 'servicePdfConverter' should then look like:

https://convert.tempusserva.dk/Word2pdf/Word2pdf?token=XXXXXXXX-XXXX-XXXX-XXXX-XXXXXXXXXXXX
