

Setting up a satellite server

The following guide explains how a master / satellite server is set up.

It is assumed that you already have the MASTER server running.

basic installation Linux

First do a normal TS installation on the SATELITE server

Add access to the MySQL database on the SATELITE server

```
iptables -A INPUT -i eth0 -p tcp -m tcp --dport 3306 -j ACCEPT  
sudo /etc/init.d/networking restart
```

Test access from the MASTER server

```
telnet satelliteServer 3306
```
