

Displaying vacancy list in CMS

The following describes how to inject the list of vacancies created in TalentPiper directly into a web page.

This helps:

- Reuse styling/layout from standard pages
- Content is indexed properly with search engines

Integrating with WordPress using PHP

From the control panel of your WordPress site do the following to integrate the vacancy list from TalentPiper:

1. Install and activate the plugin "Insert PHP Code Snippet"
2. Add a new PHP code snippet as seen below
3. Create a new page and add the snippet

Code example:

```
echo
file_get_contents("https://talentpiper.com/demo/mainpublic?command=dk.p2e.blanket.codeunit.common.PageP
ublicRecordsListAndShow&AjaxMode=1");
```

This approach is slightly faster than JQuery (below) and is indexable by search engines.

Integrating with any CMS using JQuery

In the CMS system insert the following code the place where you want to display the list.

```
<div id='tsContent'>Indhold hentes
```

```
<script>
jQuery.ajax(
{
```

```
url:
'https://talentpiper.com/demo/mainpublic?command=dk.p2e.blanket.codeunit.common.PagePublicRecordsListAndShow',
  success: function(data) { jQuery('#tsContent').html(data); }
});
</script>
```
