Quick development

Tempus Serva is a platform that lets you design and deploy customized applications, with extreme speed and reliability.

You can either create your own from scratch or reuse from the application repository.

Change and improvement is a continous process. Besides reducing longterm TCO to almost nothing, easy rework opens for working with incremential improvement in favor of traditional waterfall development.

The most important feature about Tempus Serva is however the low technical skillset required to build applications. A single day of training will enable regular office people to build new, and maintain existing systems: No more dependencies on expensive and ill-look-into-that-monday consultants.

To understand the building blocks please refer to Structure overview
